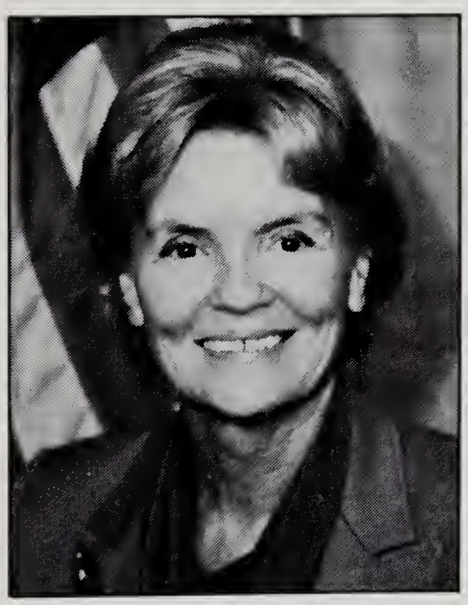
ACKNOWLEDGEMENT OF SOURCE DATA

The United States Mint sincerely thanks the many foreign governments that responded to its interrogatories. These interrogatories were the sole source of data for this report.

Special thanks also go to those governments that supplied photographs, sketches, or samples of their coins. Unfortunately, for technical reasons, many of the submissions could not be reproduced in a way that would fairly represent the aesthetic details of the coins. Thus, we are forced to omit the illustrations altogether. Nonetheless, the Mint is grateful for the submissions.

Finally, the Mint extends its appreciation to the Department of State, Washington, D.C., and its personnel overseas for receiving and transmitting the data.



Donna Pope

Donna Pope
Director of the Mint

Explanatory notes on tables

Do or *do* are abbreviations for ditto, meaning that the information is the same as that appearing immediately above. Numbers in the tables are expressed in figures arranged to conform to usage in the United States, that is, in groups of three figures separated by a comma (,). For example, one thousand is written 1,000 and one million is written 1,000,000. Fractional or decimal parts of a whole number are set off by a period (.). For example, one tenth is written 0.1, one hundredth 0.01, one thousandth 0.001, and so on.

Pieces. — The figures in this column indicate the number of pieces reported as actually manufactured by a coinage mint or mints during the calendar year indicated. Leaders (dots....) in this column indicate that no coins of that particular type were reported to have been manufactured.

Specifications of coins. — Specifications are for a single coin of the stated denomination and, in general, represent standards provided by law, decree, or regulation of the issuing government. However, details concerning tolerances of weight and fineness, and other minting controls and procedures are not published. For uniformity, different units of weight are converted to grams and different units of measure are converted to millimeters. The following conversion factors were used:

Weight units	Measurement units
1 gram = 15.43235639 grains.	1 inch = 25.4 millimeters.
1 grain = 0.0647989182 gram.	1 millimeter = 0.03937 inch.

Gross weight. — This refers to the overall weight of one coin of the specified denomination.

Metallic composition. — The proportions of metals are expressed either in percentages (symbol %) with the proportions adding to 100 percent; or, for gold and silver coins, in thousands with the proportions of precious metal and base metal adding to 1,000 parts.

Thickness. — Thicknesses of coins usually are not prescribed by government decree or law as in the case of diameters. Thicknesses cannot be so specified since they vary according to minting practices and other factors relating to coins. Thicknesses in the tables are to be regarded as averages which may vary slightly over or under the figures shown.

Shape of coins. — Coins are round unless otherwise indicated.

Coinage metal symbols:

Al - Aluminum
Ag - Silver
Au - Gold
Cr - Chromium
Cu - Copper
Mg - Magnesium
Mn - Manganese
Ni - Nickel
Sn - Tin
Zn - Zinc

* Smooth - 5 and 1 cent (except for 1981 and 1982). Milled - 1980, 1983 and 1984 10, 5, and 1 dollars, 50, 25, and 10 cents. Reeded - all others.

[1] 1980 coinage was produced by both the Royal Mint (U.K.) and the Franklin Mint, U.S.A. The production breakdown is as follows: Royal Mint - 3,750,000 50 cents, 15,000,000 25 cents, 20,000,000 10 cents, 15,000,000 5 cents, and 12,500,000 1 cent; Franklin Mint - 75 10 dollar, 150 5 dollar, 750 1 dollar, 1,500 50 cents, 3,000 25 cents, 7,500 10 cents, 15,000 5 cents, 75,000 1 cent. 150 8 piece proof sets and 92 silver 10 dollar coins were produced by an unidentified Mint. Also produced (but not reported here) were 88 8 piece proof sets for which no specifications were provided.

[2] All coinage produced by the Franklin Mint, U.S.A.

Note: Coins were dated the year of minting.
